Senior Cloud Architect / DevOps Stockholm, Sweden

summary

Cloud architect and DevOps engineer with 21 years in IT and the last decade focused on DevOps. I design and run AWS platforms with Kubernetes, Terraform and GitOps, delivered through CI/CD.

skills

AWS Terraform Kubernetes Lambda Serverless CloudWatch GitHub Actions
GitLab Helm GitOps CI/CD IaC Python Golang Linux Docker Git
Ansible Grafana/Prometheus FinOps Secrets Management OIDC SSO RBAC IAM
WAF KMS ISO 27001 SOC 2

work experience

Senior Cloud Architect · DevOps Consultant

Nov 2024 – Present

[Gina Tricot](#) — Stockholm

- › GitHub workflows for Terraform IaC with verify, test, validate, plan and apply stages; results posted as PR comments.
- › AI-driven RDS analytics workflow on GitHub Actions. Claude Opus traces top Performance Insights SQL back to ORM source and writes prioritised query and index recommendations.
- › Moved CI/CD to OIDC federated AWS roles so there are no long-lived static credentials.
- › Replaced SSH bastions with AWS SSM, and ECS SSH with ECS Exec, so no one has standing access.
- › Step-based and predictive autoscaling for business-critical ECS services; peak traffic handled without over-provisioning.
- › Cut AWS spend **15–20%** by right-sizing containers, EC2 and RDS, and moving non-critical workloads to Spot.
- › Blue-green upgrades for production PostgreSQL; less downtime, safer rollbacks.
- › Tuned AWS CodePipeline build and deploy stages so production deploys are faster and fail less.

Senior Cloud Architect · DevOps Consultant

Nov 2023 – Sep 2024

[Validio](#) — Stockholm

- › Reworked GitLab CI/CD for application releases and Terraform. Deploys got faster and pipelines broke less often.
- › Took the platform through SOC 2 and ISO 27001 — control enforcement, vulnerability remediation and the documentation auditors actually want.
- › Centralised BindPlane OTEL server on GCP for one view of GCP, AWS (CloudWatch) and Azure.
- › On-demand multi-cloud environments (AWS, GCP, Azure) for product teams, so infrastructure stopped being the bottleneck.
- › GCP metrics exporter to BigQuery in Python. Cloud Function on Cloud Scheduler, wired into GCP monitoring.
- › AlexisHR as source-of-truth for users via Google Workspace; onboarding automated through GitLab pipelines.
- › Refactored Terraform modules across AWS, GCP and Azure so ownership was clearer and new services onboarded faster.

Senior Cloud Architect · DevOps Consultant

Jun 2019 – Oct 2023

[AB Trav och Galopp \(ATG\)](#) — Stockholm

- › AWS Organization with **40+ accounts**, all in Terraform. Cut infrastructure spend **30%** with Spot, Lambda, billing alerts and drift detection.
- › Hybrid network on DirectConnect, VPCs, Transit Gateways and IPsec VPN. **78% lower** data-transfer cost, **63% lower** latency.
- › GitHub Organization in Terraform; CI/CD moved to GitHub Actions. **20%** developer productivity lift.
- › Grafana/Prometheus on EKS via Helm with custom exporters and OpenTelemetry. Grafana managed as code with Grafonnet and Terraform.
- › OPA rules for Terraform and GitHub Actions to enforce security and compliance.
- › Doppler-based central secrets platform. **60% less** time spent on secrets management.
- › FinOps with Cost Intelligence dashboards on Athena, Glue, Kinesis and QuickSight.
- › OIDC federated AWS access from cloud and on-prem; static credentials sharply reduced.
- › REST APIs on AWS Lambda with Python, Serverless Framework, API Gateway and IAM.
- › Ansible config management across on-prem VMware and cloud, wired into GitHub Actions for releases.

Reliability Engineer · Consultant

May 2018 – May 2019

[Klarna](#) — Stockholm

- › Moved AWS infrastructure to Terraform so provisioning was repeatable and reviewable.
- › Jenkins + Groovy delivery pipelines for build, test and deploy of production services.
- › Automated Kubernetes deployments, including Oracle Database and internal software.
- › Proactive monitoring with Prometheus, Grafana, CloudWatch and Datadog.

Infrastructure Operations Engineer

Sep 2016 – May 2018

[Accedo](#) — Stockholm

- › Built and operated AWS infrastructure for production services in close collaboration with dev and QA teams.
- › Established Terraform as the IaC backbone and introduced integration tests for infra code with TestKitchen and InSpec.
- › Ran internal services for monitoring (Datadog), metrics (Logstash), logging (Elasticsearch), config (Chef) and CI (Jenkins).
- › On-call rotation — troubleshoot and resolved critical infrastructure issues to keep availability high.

SysOps Engineer · System Administrator

Jul 2013 – Sep 2016

[Viaplay](#) — Stockholm

- › Built IaC with AWS CloudFormation and Troposphere; introduced Jenkins continuous delivery to AWS.
- › Operated a large-scale Zabbix monitoring cluster across **multi-petabyte** environments; added Grafana dashboards.
- › Built a Lustre/Pacemaker HA file cluster for redundant, reliable storage of critical data.
- › Wrote advanced Bash automation for a multi-petabyte archive, sharply improving throughput on massive datasets.

System Administrator

Dec 2011 – Jul 2013

[Assign Me AB](#) — Stockholm

- › Redundant XEN system with manual failover for SYVAB; kept critical municipal infrastructure stable.
- › Zabbix monitoring for XEN environments; caught health issues before they paged.
- › Jenkins as a distributed task scheduler, taking load off manual scheduling.
- › Migrated LAMP to Nginx, cutting response times; deployed an LNMP warm-backup server for business continuity.

SysAdmin Tech Lead

May 2005 – Oct 2010

NIX Solutions — Kharkiv

- › Architected high-load infrastructure for **millions of users** — large web clusters on AWS and Rackspace Cloud, with virtualization on XEN/VMware/OpenVZ.
- › Led HA and load-balancing for global services with HAProxy, LVS and Keepalived.
- › Built custom Linux-based solutions, including a custom Linux live CD and Linux-based internet gateways tailored to project needs.
- › Led a **13-person** sysadmin team; mentored junior engineers and service quality held up as the team grew.

education & certifications

Kharkiv National University of Radio Electronics

M.Sc. in System Programming

2000 – 2005 · Kharkiv, Ukraine

- › AWS Certified Solutions Architect — Associate
- › HashiCorp Certified: Terraform Associate
- › Cisco Certified Network Associate (CCNA)
